

## **Main Variant Code Charts for Kurinto Fonts**

### **Kurinto\_CodeChart\_Main.pdf**

This document provides code charts for the Main variant of Kurinto fonts. It is provided as part of a release package of the Kurinto Font Folio, available at <https://www.Kurinto.com/>.

Only code points within the three "Private Use Areas" (PUAs) are shown. Refer to the Unicode code charts for blocks of code points that are part of the Unicode Standard.

*These ligatures are copies of the ligatures at U+FB01-U+FB02. They have become so widely used in the design community that they have become a de-facto standard. It has been commented that "Populating the fonts with different glyphs on these positions is support suicide and will make the fonts useless to a professional design community." For these reason, I have included them in Kurinto fonts.*

**Range: F130–F32F**

This block provides the PUA code points set aside by SIL International for preparing fonts to facilitate corporate transition to Unicode. This block is largely of historical interest. Many of the character assignments are deprecated, following the adoption of those characters into the Unicode Standard.

This version of the block is based on information available at <https://scripts.sil.org/SILPUAassignments> last updated 2019-01-17 and retrieved 2020-0630. See that resource for more information.

This block is only implemented in Kurinto Book (the Main variant), and the code points shown are from that font. The glyphs are sourced from Gentium.
